

# PrintVis

Connect your hive with PrintVis, the Microsoft-based ERP & MIS solution for every type of print business

[crimsonwing.com](http://crimsonwing.com)

**As print and packaging companies face consolidation and the pressures imposed by digital communication**, the need to focus on operational demands such as running lean, meeting tighter and tighter deadlines and reducing waste is more apparent than ever. Successful businesses need to be supported by systems that enable them to act with agility and insight.

An integrated ERP & MIS solution like PrintVis, built on Microsoft Dynamics, can help companies achieve their business aspirations. Built on Microsoft's proven architecture, it empowers employees to work together, and produces reliable and actionable information.

**Rather than reinvent the wheel, PrintVis is built into the globally-proven MIS/ERP system that is Microsoft Dynamics NAV.**

With PrintVis, you get a robust-yet-flexible management information system that gives you control over every process – from estimating to job planning to inventory management (your papers, your inks, your plates, your dies) – all the way through to invoicing, shipping and job costing after the fact.

- **PrintVis** is exceptionally scalable, so it can grow as your business grows. It offers multiple user types and deployment options to suit your business and your budget.
- **PrintVis** will help you drive down costs and increase value in your company, with continuous innovation integrated into the compelling core functionality that Microsoft Dynamics NAV provides.
- With **PrintVis** you can easily handle every stage of production - from the quote request until the job is completed and delivered to the customer, invoiced and analysed.

**KPMG Crimsonwing** is a leading Microsoft Gold Partner, certified for Microsoft Dynamics and a preferred solutions provider to the Print, Media, and Publishing industries.

With over 50 years of print industry experience in our team, our clients include familiar organisations such as Stephens & George, The Adare Group, Incisive Media, Kalamazoo and Coveris.

# Features

## Case study: Stephens & George

The 220-employee commercial printer implemented PrintVis with the support of KPMG Crimsonwing to have a system flexible enough to cope with the requirements of a comprehensive print business whilst adapting to the ever-changing market.

**More efficient employees:** PrintVis has enabled commercial departments to produce higher levels of work without the need for additional labour. For example, the flow from estimate to order is painless and allows for a high-level of flexibility. Purchasing practices have improved and entries are posted into the financial ledgers with ease.

**Time-saving through automation:** The business is also making enormous time saving with the help of automated monthly stock controls and reports from the standard package. The original four-day stock management process has been condensed into just one hour.

**Increased accuracy:** The invoicing area benefitted from the improved processes. Accurate invoicing to paper, email or automatic external accounting systems was achieved and trimmed back their invoice times from 10 working days to 3 working days.

**Greater insight:** Job creation and full factory scheduling was introduced so that machinery can be loaded up with work in advance of the production becoming available, predicting future factory throughput and sale levels. This streamlines the process and facilitates advanced planning for production.

**Lower maintenance costs:** Furthermore, an integrated system has helped the business cut costs and simplify the management of their technology internally.
